

Specification sheet

NuCommercial is NuGrow's general purpose soil and most popular product. It comprises a high-grade organic compost and sandy loam-based material. It offers a high-quality base material for use on highways and in general landscaping, including under turf. NuCommercial is also well-suited to planter boxes that can take a higher-density material. NuCommercial is widely used by leading landscapers across South East Queensland who have seen, time and again, the impressive results it achieves. It has featured on numerous major road projects and residential developments. Like all organic soils, it is not suited to native groundcovers such as grevilleas and other outback natives. However, rainforest-based natives will love NuCommercial. NuCommercial conforms to AS4419 and MRTS11-16B.

Features

- Passes AS4419 Soils for Landscaping and Garden Use
- Ideal for under-turf and garden areas
- 100% recycled beneficial ingredients
- Test results and analysis available

Technical specifications

NuCommercial conforms to Australian Standard AS4419, with regular monitoring of the product to ensure conformance. Laboratory results are available on request. NuCommercial also conforms to Main Roads Specification MRTS16 for landscaping planting media.

Typical properties

pH	6.5-7.5
EC	<1.2dS/m
Organic matter	3-10%

Applications and uses

NuCommercial is suitable for large projects as garden soil and for construction and under-turf applications. For particular landscape applications, such as low P plants and shrubs, consult your soil advisor or landscape architect.
