

Specification sheet

NuPremium is a high-quality soil made of composted organics, ash and a sandy loam-based material to provide a balanced mineral profile. It is ideal for planter and podium boxes and its lightweight composition makes it well-suited to rooftop gardens. With its rich organic content and free draining properties, NuPremium is extremely versatile across gardening uses. It is particularly favoured as a vegetable garden mix because vegetables are heavy feeders and benefit from the nutrients available within organic soil. When used in conjunction with specialised fertilisers, NuPremium offers an unmatched material for vegetable growers. As it is an organic product, it is not suited to native groundcovers such as grevilleas due to the phosphorus content. NuPremium conforms to AS4419.

Features

- Passes AS4419 Soils for Landscaping and Garden Use
- The ultimate in garden mixes
- 100% recycled beneficial ingredients
- Test results and soil analysis available

Technical specifications

NuPremium conforms to Australian Standard AS4419 and can be used in most planting applications due to its balanced, plant-available nutrient profile.

Typical properties

pH	6.5-7.5
EC	<1.2dS/m
Organic matter	15%

Applications and uses

NuPremium is suitable for small and large garden projects. It offers greater performance in general growing situations. NuPremium also provides peace of mind that you have used the highest performing mix in the NuGrow range. For particular applications, such as low P materials and shrubs, consult your soil advisor or landscape architect.
