

Specification sheet

NuTop Dress is a unique, organic-based top dressing material. The soil is run through an 8mm screen that increases the consistency of particle size within the organics. It is then mixed with a sand-based mineral component to add weight. The result – a top dress solution that fills and levels easily while also enabling you to give your grass a healthy nutrient hit. NuTop Dress offers the additional advantage of holding nutrients longer in the root zone and can be used in conjunction with fertilisers. Water your grass every two days during spring and summer and avoid mowing it until you see the seed start to grow back. Where possible, mow the seed back in and watch your grass turn emerald green. NuTop Dress is also suitable as an under-turf medium but not for general garden applications. NuTop Dress conforms to AS4419.

Features

- Passes AS4419 Soils for Landscaping and Garden Use
- Ideal for filling hollows while adding nutrients to lawn areas
- 100% recycled beneficial ingredients
- Test results and analysis available

Technical specifications

NuTop Dress conforms to Australian Standard AS4419 and can be used in all turf applications due to its balanced, turf-available nutrient profile.

Typical properties

pH	6.5-7.5
EC	<1.2dS/m
Organic Matter	10-15%

Applications and uses

NuTop Dress is suitable for small and large turf projects. NuTop Dress offers greater performance in general top dressing situations. NuTop Dress also provides peace of mind that you have used the highest performing mix in the NuGrow top dressing range. For particular site specific applications, consult your soil advisor or landscape architect.
